

Sai Sarath

Mobile: +91 9441015549

Email: sai.cloud1809@gmail.com

EXPERIENCE SUMMARY:

- Overall, 5.5 years in Information Technology with strong background working experience Data Engineer and Certified Azure Data Engineer
- Hands on experience in Azure Data Factory, Azure Databricks, Azure Data Lake, Azure SQL Database, Logic Apps, Python basics, PySpark, GitHub, MS SQL Server.
- Experience building data platforms in a hybrid environment - data pipelines and data stores using on-premises and Azure data services such as data factory, SQL database, SQL data warehouse, and data processing languages such as SQL, Basic Python.
- Experience on Azure Data Factory, Azure Data Lake, Blob Storage, Azure Synapse Analytics, Azure SQL Database, Azure Key Vault, Azure Data Bricks and Azure SQL Data warehouse and controlling and granting database access and Migrating On-Premises database to Azure Data Lake Store using Azure Data Factory.
- Good understanding of Spark Architecture including Spark Core, Spark SQL, Data Frames, Spark Streaming, Driver Node, Worker Node, Stages, Executors and Tasks.
- Created Pipelines in Azure Data Factory using Linked Services / Datasets / Pipeline / to Extract, Transform and Load Data from different sources like On-Premises Databases, Blob storage, Azure SQL Database.
- Good Knowledge on Azure Data Factory(ADF) , Integration Runtime (IR), File system data Ingestion.
- Worked extensively with on-premises databases, optimizing data extraction and loading processes for seamless integration with Azure-based solutions.
- Conducted performance tuning and optimization of database systems for improved query performance.
- Collaborated with cross-functional teams to design and implement scalable and maintainable data solutions.
- Worked on data modeling and schema design for relational and non-relational databases.
- Experience on building Orchestration Azure data Factory for scheduling purpose.
- Regularly worked on user stories, developing solutions aligned with customer requirements.
- Investigated, troubleshot, and resolved incidents within the defined SLA, ensuring minimal disruption to business operations.
- Conducted performance tuning and optimization of database systems for improved query performance.
- Provided tier-2 and tier-3 level support and track issues/requests for system enhancements.
- Interacting with client on scrum calls.
- Good knowledge of Data modeling & Data warehouse concepts and principles like Star Schema, Snowflake.
- Having good exposure on Architecture of Azure Synapse Warehouse.
- An excellent team player with highly favourable interpersonal, multitasking with hard working, fast learning and prioritizing capabilities.
- Proactively involved in Regular Deployment activities and Patching activities.

ACADEMIC CREDENTIALS

- **B. Tech** from on Electronics and communication Engineering (E.C.E) JNTU, **Ananthapur.**

TECHNICAL SKILL SET

Skill	Experienced	Awareness
Cloud ETL Tools:	Microsoft Azure Data Factory, Azure Data Bricks.	Data Ware Housing, AWS ,Lamda Functions
Database S/W's:	SQL Server2008/2012	
Programming Language:	SQL, Python, and Py-Spark	
OS:	Windows, UNIX	
Other Tools:	TSG Service Now, Winscp, Putty, Git HUB, Jenkins	

EMPLOYMENT HISTORY

<u>Tenure</u>	<u>Company</u>	<u>Designation</u>
Nov-2020 – Till date	Tata Consultancy Services	Software Engineer

PROJECTS HANDLED

Project #1

- **Organization : Capgemini Technology Services India Limited**
- **Project Title : IPH Replatforming**
- **Client : PetPlace**
- **Environment : Azure data Pipe Line , Az SQL, Databricks, Pyspark.**

Project description:

Petplace Replatforming – Data Migration & Medallion Architecture

Worked on a large-scale data migration and modernization project for Petplace, replatforming legacy CE (Customer Engagement) and F&O (Finance & Operations) systems into the Azure ecosystem. Data from multiple sources was ingested into Azure Data Lake Storage (ADLS) as the landing layer, processed through Azure Databricks using the Medallion Architecture (Bronze, Silver, Gold layers), and delivered into Microsoft Dataverse for downstream applications and analytics. The project involved designing full-load migration pipelines, implementing incremental load strategies for ongoing data ingestion, and ensuring seamless integration with existing AX job prodserver processes.

Responsibilities:

- Led data migration initiative for Petplace replatforming project, consolidating data from multiple source systems into Azure Data Lake Storage (ADLS) as the landing layer.
- Designed and implemented Medallion Architecture (Bronze, Silver, Gold layers) using Azure Databricks for scalable data processing and transformation.
- Collaborated with Customer Engagement (CE) and Finance & Operations (F&O) teams to define column mappings and entity names, ensuring accurate schema alignment across systems.
- Developed full load migration pipelines for initial data transfer, followed by incremental load strategies to handle ongoing data ingestion efficiently.
- Integrated data pipelines with AX job prodserver for CE and F&O systems, ensuring seamless synchronization between legacy and modern platforms.
- Engineered Gold layer outputs to push curated and business-ready data into Microsoft Dataverse, enabling downstream applications and analytics.
- Implemented data quality checks, validation rules, and reconciliation processes to ensure accuracy and consistency across migrated datasets.
- Optimized ETL workflows in Databricks for performance and scalability, reducing processing time and improving reliability.
- Partnered with cross-functional teams (CE dev team, F&O dev team, business stakeholders) to align technical deliverables with business requirements.
- Strengthened expertise in Azure ecosystem (ADLS, Databricks, Dataverse), data migration strategies, and enterprise data architecture best practices.
- Experience in developing Spark applications using Pyspark in Databricks for data extraction, transformation, and aggregation from multiple file formats for Analyzing & transforming the data to uncover insights into the customer usage patterns
- Designing a flow using Logic Apps to automatically trigger the pipeline that loads data from SharePoint to ADLS when a new record is added or an existing record in the SharePoint location is changed, and then the ADLS data is copied to SQL Server.
- Good Understanding of Spark Architecture including spark core, spark SQL, Data Frame, Driver Node, Worker Node, Stages, Executors and Tasks.

Project #2

Organization : Tata Consultancy Services

- **Project Title :** GE Healthcare Data Integration and Analytics Platform
- **Client :** GE HEALTHCARE
- **Environment :** Azure data Pipe Line , Az SQL, Databricks, Pyspark.

Project description:

GE Health care Machine Data Platform:

- The GE Healthcare MDP (Medical Data Platform) Team focuses on developing and managing data-driven solutions to enhance healthcare analytics, interoperability, and operational efficiency. The team works with cloud technologies, primarily Microsoft Azure, to build scalable and secure data pipelines, integrate diverse healthcare data sources, and enable advanced analytics for clinical and business insights. Their solutions support real-time data processing, regulatory compliance, and improved decision-making in the healthcare domain.

Responsibilities:

- Implemented Azure Data Factory (ADF) extensively for ingesting data from different source systems like relational and unstructured data to meet business functional requirements
- Design and developed Batch processing and real-time processing solutions using ADF, Databricks clusters and stream Analytics
- Created numerous pipelines in Azure using Azure Data Factory v2 to get the data from disparate sourcesystems by using different Azure Activities like Move & Transform, Copy, filter, for each, Databricks etc. Maintain and provide support for optimal pipelines, data flows and complex data transformations and manipulations using ADF and PySpark with Databricks.
- Automated jobs using different triggers like Events, Schedules and Tumbling in ADF.
- Created, provisioned different Databricks clusters, notebooks, jobs and autoscaling.
- Performed data flow transformation using the data flow activity.
- Used Polybase to load tables in Azure synapse.
- Implemented Azure, self-hosted integration runtime in ADF.
- Improved performance by optimizing computing time to process the streaming data by optimizing the cluster run time.
- Perform ongoing monitoring, automation, and refinement of data engineering solutions.
- Experience in developing Spark applications using Pyspark in Databricks for data extraction, transformation, and aggregation from multiple file formats for Analyzing & transforming the data to uncover insights into the customer usage patterns
- Good Understanding of Spark Architecture including spark core, spark SQL, Data Frame, Driver Node, Worker Node, Stages, Executors and Tasks.
- Designing a flow using Logic Apps to automatically trigger the pipeline that loads data from SharePoint to ADLS when a new record is added or an existing record in the SharePoint location is changed, and then the ADLS data is copied to SQL Server.
- Designing an ADF and Databricks workflow to convert CSV data to JSON data using Spark Data frames.
- Closely work with SME in analysing system requirement and specification to translating the requirement into ETL Design.
- Create the mapping sheet based upon the requirement provided by client.
- Ingest the data from blob storage (excel file) to SAP Foundation layer delta tables using ADF with the help of ingestion team and trigger the pipelines.
- Perform the unit testing/data validation once development got completed.
- Extensively used cloud connectors Azure Synapse (Sql DW), Snowflake, AWS, Azure Data Lake Store, Azure BLoB Storage, Oracle, SQL Server.
- Migrate the code from one environment to another environment.

Project #2

Project Name : Sales analysis reporting
Client : Sainsburys
Environment : Microsoft Azure (Data Factory, Azure Databricks, Blob Storage, Azure Data Lake Gen2), Delta Lake Tables, SQL server 2014, Azure SQL Database.

Project description:

Sainsbury's is a British supermarket and the second-largest chain of supermarkets in the United Kingdom, the company was the largest UK retailer of groceries for most of the 20th century. His trading philosophy, as stated on a sign outside his first shop was: "Quality perfect, prices lower".

Responsibilities:

- Understanding the Client's business, i.e., Requirement gathering, and creating a design document.
- Coordinate with data mapping and data cleansing and DV team to fulfil the requirement.
- Developing the Azure DF pipelines using copy activity.
- Achieving the business transformation using Azure Data Factory/Pyspark databricks notebook using delta tables.
- Developing Pyspark script to move data from Data Lake to Azure SQL DB.
- Creating data Bricks notebook transforming data using pyspark, scheduling those jobs.
- Microsoft Azure cloud with Azure Data Factory, Data bricks, Functions, key vault, Data Lake, Azure logic apps.
- Conducting Unit Testing on the functionality on Pipelines and code base.
- Involved in Internal UTA testing.
- Preparing the documents for production move.
- Daily attending the client calls for clarifying the queries.

Project #3

Project Name : Citi Data Lake & Analytics Platform
Client : CITI Bank
Environment : AWS EC2, Lamda,S3,Redshift,DAG,Airflow

Project description:

Citi Bank is the largest bank to provide service to customers and maintaining the perfect service Citi Bank is undertaking a data engineering initiative to build a robust, scalable, and high-performance Enterprise Data Lake & Analytics Platform. This platform will serve as the centralized data hub for ingesting, processing, and analyzing large volumes of structured and unstructured data from various banking operations, including retail banking, investment banking, fraud detection, risk assessment, and regulatory reporting.

Responsibilities:

- I have worked AWS Data Engineer Support.
- In this we monitor the Data through spark processing.
- I need to monitor the loads on S3, RDS, Redshift.
- I involved in patching activities and deployments.
- I need to work on load failures by analyzing the code
- I need to verify the data is processing or not by running SQL Queries
- I have worked on AWS Step Functions, Lamda, Glue job.
- Monitoring loads failures through doud watch Logs.
- Creating P1, P2, P3 & P4 incidents for any failovers and following up with the responsible OBJECTIVE support teams.
- Writing Query Optimizing Techniques.
